

Table of Contents

Preface	xi
How To Use This Book With The I-Phi Website	1
1. Introduction	3
The New Ideas of Information Philosophy	4
The Three Worlds of Information Philosophy	9
Information Creation in the Material World	10
Information Creation in the Biological World	11
Information Creation in the World of Ideas	12
What Does Creation of Information Mean?	13
2. Metaphysics	15
Possibility and Possible Worlds	22
Naming and Necessity	24
Actual Possibles	25
Actualism	28
Identity	30
Criteria	30
Coinciding Objects	33
Composition	38
Aristotle Essences	45
Modal Logic Is <i>Not</i> Metaphysics	47
3. Ontology	55
The Metaphysicist's Approach	56
Continuous or Discrete?	58
Meta-Ontology	61
4. Free Will	63
The Two-Stage Model of Free Will	64
What If?	65
Review of the Free Will Problem	66
The Temporal Sequence of Freedom and Determination	71
The Standard Argument <i>Against</i> Free Will	75
Possible Worlds and Alternative Possibilities	76
Free Will and Creativity	77
5. Value	79
An Information-based Moral Code?	84
A Minimum Moral/Political Message?	85
An Information-based Social Contract?	87
Information and Negative Entropy as Objective Values	89
6. Good and Evil	91
Information (Negative Entropy) as Objective Good?	92
Evil	93
A Statistical Comparison with Societal Norms	95
7. God and Immortality	97
No Creator, But There Was/Is A Creation	98
Theodicy (The Problem of Evil)	98
Omniscience and Omnipotence Contradictory?	98
The Ergod	99
The Problem of Immortality	100
8. Epistemology	103
The History of Epistemology	104
The Search for Knowledge Turns Inward	109
9. Universals	119
The One and the Many	122
Philosophical Triads	126
Three Sources for Authoritative Knowledge	128
Types of Triads	128
A Few Tetrads	129
10. The Problem of Induction	131
Induction and the Scientific Method	137
11. The Problem of Meaning	139
Meaning in the Theory of Information	142
12. Mind	147
The Scandal in Psychology	147
Mind as <i>Immaterial</i> Information	148
Information Evolves to Become Mind	149
An Information Mind Model	150

13. The Mind-Body Problem	155
Interactionists 156; The Mind-Brain Identity Theory 158; Eliminative Materialism 159; Mind/Body and the ERR 163	
14. Consciousness	165
The Binding Problem 166	
15. The Self and Other Minds	171
Mind Over Matter? 172; The Problem of Other Minds 173	
16. Mental Causation	177
The Problem of Mental Causation according to Kim 179; The Emergence of Life from Matter and Mind from Life 179; Ribosomes Select Randomly Moving Amino Acids 181; Ion Pumps in Neurons Select Individual Atoms 183; Information Solves the Problem of Mental Causation. 185; “Bottom-up” Physical Processes Are Not Deterministic 186; Molecular Machines 187	
17. Information Interpretation of Quantum Mechanics	189
The “Possibilities Function” 194; Possibilities and Information Theory 196; Other Interpretations of Quantum Mechanics 198	
18. The Measurement Problem	201
Von Neumann’s Two Processes 205; Designing a Quantum Measurement Apparatus 207; An Irreversible Example of Process 1 208; The Boundary between the Classical and Quantum Worlds 210; The Role of the Conscious Observer 211; Three Essential Steps in a “Measurement” and “Observation” 214; Quantum Collapses Can Produce New Information 215	
19. Determinism	217
Indeterminism 219; Determination 220; The Emergence of Determinism 222; The History of Determinism 222	
20. Collapse of the Wave Function	225
What is the Wave Function? 225; Information Physics Explains the Two-Slit Experiment 227; Where Is The Information About Probabilities Embodied? 230	
21. Entanglement	233
Einstein’s Discovery of Nonlocality and Nonseparability 235; The Importance of Conservation Laws in Entanglement 240; Can a Special Frame Resolve the EPR Paradox? 242; Do We Need Superdeterminism? 245; EPR “Loopholes” and Free Will 246	
22. Decoherence	249
The Decoherence Program 251; The Measurement Process 257; The Measurement Problem 259; What Decoherence Gets Right 261; What Decoherence Gets Wrong 263; Quantum Interactions Do Not Create Lasting Information 263; The Transition from Quantum to Classical World 263; Decoherence and Standard Quantum Mechanics 264	
23. Schrödinger’s Cat	269
24. The Arrow of Time	277
The Thermodynamic Arrow 277; The Historical Arrow 281; The Radiation Arrow 282; The Cosmological Arrow 283	
25. Microscopic Irreversibility	285
The Origin of Irreversibility 287; Detailed Balancing 290	

26. The Recurrence Problem	293
Zermelo's Paradox 293; The Extreme Improbability of Perfect Recurrence 295	
27. Emergence	297
Emergence or Reduction? 297; History of the Idea of Emergence 298; Three Kinds of Information Emergence 302; Emergence in the Body 305; Emergence in the Brain 306; The Emergence of Immaterial Information Processing 306; The Emergence of Determinism 307; There Was a Time with No Determinism 308; Emergence Denied 309	
28. Origins of Life and Information	311
History and Evolution in the Universe 312; The Origin of Information 316; Information in Biology 317; Biological Machines 319; Ribosomes 321; ATP Synthase 323; The Flagellum 324; Chaperones 326; Motive Power? 326; Life, Love, and Death 327; Working Backwards in Time 327	
A. Information	331
Information in the Universe 334; Information and Entropy 342	
B. Entropy and the Second Law	345
Discrete Particles 345; The Second Law of Thermodynamics 349; Entropy Flows in the Universe 354; Positive and Negative Flows 356	
C. Quantum Physics	361
Basic Quantum Mechanics 366; The Principle of Superposition 367; The Axiom of Measurement 368; The Projection Postulate 369; Dirac's Three Polarizers 371; The Wonder and Mystery of the Oblique Polarizer 374; The Quantum Physics Explanation 375; Einstein and Quantum Physics 376	
D. Chance	379
The Calculus of Probabilities 381; Chance and Free Will 392	
E. Experience Recorder and Reproducer	395
The Binding Problem 398; Speed and Power of the ERR 399; How the ERR Works 400; The ERR and Consciousness 401; Four "Levels" of the ERR 403; What It's Like To Be A... 404; Mental States? 405; Summary 406	
F. The Cosmic Creation Process	409
The Fundamental Question of Information Philosophy 409; The Two Steps in Cosmic Creation 411; The Flatness Problem in Cosmology 414; The Problem of Missing Mass 416; The Horizon Problem 417	
G. Biosemiotics	419
Will Biologists Accept Biosemiotics? 420	
Bibliography	423
Arrow of Time 423; Biology 423; Chance 424; Consciousness 424; Cosmology 424; Decoherence 425; Einstein 425; Emergence 426; Entanglement 426; Epistemology 426; Free Will 427; Information in Biology 428; Information 428; Meaning 428; Metaphysics 429; Mind 429; Origin of Life 431; Philosophy 432; Physics 432; Psychology 433; Quantum Mechanics 434; Theology 435; Value 435	
Index	437
